

SPORTISCA T-Play
Sports turf of the latest generation.

SPORTISCA T-PLAY is a multi-purpose sports turf of the latest generation. Inspired by nature – optimized for multi-functional use.

SPORTISCA T-PLAY offers an ideal turf for a wide range of sports activities all year round. No matter the weather conditions, the turf can be played on at any time, with easy care. This system warrants excellent values with regard to shock and impact absorption thanks to its weather resistant elasticity ensured by the elastic layer of SPORTISCA T-PAD. The distinct pile construction (Triple T-Technology) provides the required traction and uncompromised comfort of play.

SPORTISCA T-PLAY has been developed to elevate the pleasure of play. Wherever a turf for multi-functional sports activities is required, **SPORTISCA T-PLAY** is the right product. The advantages of its sports-functional properties such as permanent use and ease of maintenance are especially valuable for school sports arenas and communal playing field.

PLEASURE OF PLAY

→ Variety

SPORTISCA T-PLAY has been developed for multi-purpose sports activities. The permanent use in ideal conditions enhances the pleasure of play for athletes young and old. Whatever sports activity enjoyed on natural turf can be played on SPORTISCA T-PLAY.

→ Authenticity

Authentic and comfortable: true to natural turf, SPORTISCA T-PLAY requires neither sand nor rubber granules for refill. No unnatural elements can spoil the enjoyment of play.

→ Ideal conditions all year round

No matter the weather, wind or wear and tear, SPORTISCA T-PLAY offers excellent multi-sports functional properties.

→ Comfort of play

Through its distinct floor construction, the Triple-T Technology™, registered for patent, sets unequalled marks with regard to comfort of play.

→ No statics

SPORTISCA T-PLAY has permanent anti-static properties and thus shields the players from static shocks.

→ Efficient drainage

The integrated duct-system ensures a steady drainage. A proper subfloor provided, the play can continue even during extreme downpours.

HEALTH

→ Shock absorbing effect

A shock absorbing effect is being secured by the T-Pad™ beneath the surface. The optimal energy absorption is being warranted independent of temperature and maintenance - during the entire lifetime of the product.

→ Safety of movement

The combination of the T-1 and T-2 fibers not only warrants the necessary grip and stability but also provides lateral support of the sports shoe.

→ Protection of the respiratory tracts

SPORTISCA T-PLAY requires neither sand nor rubber granules for refill. This precludes the emission of fine dust particles which can inhibit the respiratory tracts.

→ No odor

A relief for the player and the environment: even at high temperatures there will be no odor emissions.

→ No health hazardous materials

The elimination of granules precludes frequently discussed questions regarding risks of health hazard. Used by infants, students or adults:

SPORTISCA T-Play is a safe choice.

MAINTENANCE

→ Low maintenance

The distinct pile construction of SPORTISCA products eliminates labor intensive maintenance work. There is no need to ensure the proper density of the granules. There is no need for regular deep cleaning. Regular vacuuming and brushing of the turf is all that's required.

→ Modest cleaning effort

The cleaning effort around the playing field is significantly reduced. No granules will be carried out onto the surrounding areas. No fill material in locker rooms, showers, clothes and washers.

→ No recurring material expenses

There will be no recurring material costs since there is no need for granules refill.

→ No expenses for markings

Permanently integrated lines during the tufting procedure eliminate recurrent expenses for markings.

→ Easy snow removal

Snow removal will be simplified since there will be no granules mixed with snow. Snow blowing and brushing of the turf restores the field for regular play within a short period of time.

DURABILITY

→ Less seams

The T-Roll™ systems of SPORTISCA facilitates the production of extra long rolls, long enough to cover the full width of a playing field. This minimizes the amount of seams and avoids weak areas.

→ Integrated markings

If markings are required, SPORTISCA can be manufactured with integrated cross lines. As a result, weak areas can be avoided.

→ Durability and efficiency

The elaborate secondary backing (SPORTISCA T-Back) warrants supreme dimension stability, extreme wear & tear and extraordinary fiber anchorage.

→ Select suppliers

SPORTISCA is being manufactured exclusively with raw materials from select suppliers furnishing materials which meet our high quality standards.

→ Generous material utilization

The use of well-chosen high quality materials offers our clients a lasting value and warrants a solid investment protection.

→ Climate resistant

Long-lasting high dimension stability, even under heavy use; no matter the weather conditions

→ Made in Switzerland

SPORTISCA is being produced in Switzerland by TISCA TIARA, a leading Swiss manufacturer of textile floor covering.

SUSTAINABILITY

→ Ecological compatibility

The environment is important to us. SPORTISCA doesn't require softeners or solvents. On the contrary: this un-refilled sports turf system meets ecological standards high enough to be installed even in groundwater protection zones.

→ Environmentally friendly production

Through active GUT-membership (*Gemeinschaft umweltfreundlicher Teppichboden*) SPORTISCA is being produced according to the strictest of ecological guidelines.

→ Reduction of CO₂ emissions

As ENAW (*Energie-Agentur der Wirtschaft*) certified factory TISCA TIARA actively contributes to the CO₂ reduction and optimizing of energy efficiency.

→ T-Care™

A hallmark for the environment. From the product development to the finished product, the ecological standards at TISCA TIARA are very high, a fact conveyed in our T-Care™ program.

→ T-Cycle™

According to our T-Cycle™ recycling concept, SPORTISCA products can be recycled in an environmentally friendly method.
